

# Donald A.C. Bouffard, B.Sc.; F.G.A.C.; P.Geo. [Retired]

---

Don became a geologist in 1973 and has never looked back since.

He worked as an exploration and mining geologist across Canada, in all provinces, from Quebec right on through to B.C., including the Yukon.

His C.V. also includes the following: school teacher, industrial minerals consultant, tour guide, environmental minerals researcher, gem-cutter, artist-in-training. He is now [finally] retired, but still very active and involved in Life... and yes, STILL learning new 'stuff'!

He has hiked, driven, boated, flown (helicopter & plane) throughout most of B.C.; covering all 4 points of the compass; N. to S. - From Stewart to Osoyoos; W. to E. - From Vancouver Island out to Golden. Just another lucky scientist fortunate enough to have seen and experienced Canada, first-hand...

He has been a member of KEG since 1992 and is still actively involved as a Science & Tech promoter.

“Life has been challenging and interesting as Hell, with more than a few close calls and adventures!”, he says smiling & laughing simultaneously [Go figure!]
